

Single arm electric endoscopy pendant(NEW)

HFP-DD240 380(NEW)

With the development of minimally invasive technology, endoscopic technology has been widely used in general surgery, Urology, gynecology, thoracic surgery and other surgical treatment fields. As the bearing platform of endoscopic treatment equipment, the endoscopic tower provides a comprehensive service for your operation. The mirror tower is suspended on the ceiling with high bearing capacity. The tower body and cross arm can rotate 340 degrees. It is equipped with mechanical brake to prevent floating. The tower body is equipped with multi-layer equipment platform and medical gas terminal. The tower height can be controlled by electric lifting, which is easy to operate and easy to use.
